

Lectures on comparative anatomy Volume

By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 120 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1828 Excerpt: . . . these projecting lateral portions cross the pupil and fold over one another, but do not adhere together; although this is the usual state of the iris, it admits of variation, for in some specimens these lateral projections had receded sufficiently to render the pupil of an oval form and single; it is therefore probable that the iris can so enlarge the pupil as to make it of considerable size, forming a pyramidal oval, large above and small below, while at other times it covers the middle space, and leaves only two apertures for light to come to the crystalline lens, the uppermost the largest. That vision can only be carried on while the pupil is thus made double, there can be no doubt, since the crystalline lens instead of being spherical is not even circular, having a small projection at the lower edge, directly behind the...

Reviews

The best pdf i possibly go through. it was writtern quite properly and useful. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Miss Sienna Fay Jr.**

Undoubtedly, this is the best job by any article writer. This really is for all those who statte that there was not a worth reading. I am very easily can get a enjoyment of reading a published pdf.
